

See trends, outliers and anomalies with Mobile Performance Visualization and customize your reporting with additional data fields using Data Extender.

ENHANCE REPORTING CAPABILITIES WITH DYNAMIC, EASY-TO-USE VISUAL REPRESENTATIONS AND MORE ROBUST PATIENT ENCOUNTER DATA.

With EPSi Mobile Performance Visualization (MPV), you can equip decision-makers with accurate, real-time information in actual care settings vs. an after-the-fact internal meeting or distributed report. MPV makes reporting simple and intuitive so you save money and time, while enabling better decision-making.

MPV gives you dashboard-level reporting without the need for an expensive third-party business intelligence tool or a specialty tool custom-built by IT.

- **Dashboard:** View your completed EPSi reports on various devices, in real-time. Your dashboard is delivered at the same time as your cube report.
- **Build-it-once compatibility:** MPV resides on top of your existing EPSi reports.
- **Down to the details reporting:** Contains full drill-down capabilities.

Turn reliable data into easy-to-share insights.

Manipulate data in real time to visually enhance any meeting. Build your dashboard, then use MPV to find and analyze outliers using dynamic, intuitive graphs and not just flat reports. Share Service Line profitability reports or Departmental flex variance reports with stakeholders using highly engaging and customizable charts to tell your organization's financial story so you can make well-informed decisions, control costs, restructure contracts and get the revenue that you need.

Get the full picture.

Mobile Performance Visualization is just part of an overall solution needed to reduce costs, maximize margins and improve care. The pressure on your organization to handle changing market conditions is too great to trust tools that only give you superficial insights. Get the most robust solutions available, from the most trusted provider in the industry.

Get clarity. Go deep.

Healthcare delivery systems face increasingly complex demands on their financial organizations. The pressure is on to win while meeting new market requirements, from bundled payments, accountable care organizations and value-based care, to population health, increasing labor costs and the need to integrate across product lines. In today's market, a hospital's financial, operational and clinical leaders need to incorporate, analyze and utilize data to drive the organizational transformation required to succeed.

Integrate MPV with existing EPSi solutions.

MPV is fully compatible with existing EPSi cubes and can be used with your existing EPSi cube reports to add dynamic and visually appealing graphics that highlight financial, operational and clinical data trends. With MPV, you will never miss an opportunity to improve your bottom line.

Drill-down capabilities:

We know that recognizing anomalies in data is only part of your job, so we've designed Mobile Performance Visualization with drill-down functionality to follow up on outlying variables. Discover essential insights by diving deep into past and predictive financial statements, product line reports, cost of procedures and more.

Familiar cube manipulation methods:

EPSi's Mobile Performance Visualization is powerful, but designed to be simple and intuitive. If you are familiar with Microsoft Excel, you'll be producing visually impactful reports within minutes or enjoy a customized training demo from one of our expert customer service representatives.

Completely custom reports:

We know that your needs are unique because your organization is unique. Use the graphs and charts centered around your unique initiatives, priorities and patient needs. With Mobile Performance Visualization, you can easily visualize and analyze the data you need to recommend operational changes.

See while you build.

EPSi Mobile Performance Visualization's WYSIWYG (What You See Is What You Get) editor takes the guesswork out of manipulating graphic displays to get just the right view or layout. See exactly what your screen and print output will look like as you make the report.

Get the power to add more data fields.

With Data Extender, you can add up to 700 data fields to any patient record, allowing you to integrate more robust patient encounter data. This gives you visibility across the entire continuum of care, allowing you to add to existing records and sync with additional data sources.

Unlike other solutions that have a fixed number of fields that severely limit your ability to understand, track and act on patient data being gathered throughout your organization, Data Extender takes you from simple, fixed reports to reports that are simply extraordinary.
